[USER MANUAL OF VERYDOC ENCRYPT PDF]

VeryDOC Encrypt PDF is a tool for setting open and master passwords to encrypt and protect PDF files. It supports professional encryption to protect PDF files.

Contents

Introduction

VeryDOC Encrypt PDF is a professional application, which helps you encrypt your PDF files with open passwords and master passwords singly or in batches to protect your PDF files with professional encryption. With this smart tool, restrictions for master passwords, e.g., printing, editing, coping, and changing, etc., could be set accurately. In addition, **VeryDOC Encrypt PDF** is an independent tool, which can run smoothly without professional PDF editors or readers.

System Requirement

Both 32 bits and 64 bits Windows 98/ME/NT/2000/XP/2003/Vista/7/2008

How to use GUI

Download and install

- Download installer of VeryDOC Encrypt PDF
- Double-click installer to follow setup wizard step by step > trial version software can be installed in your computer in the end

Launch VeryDOC Encrypt PDF

Double-click shortcut, then, GUI interface pops on screen, the following snapshot shows you software GUI interface:

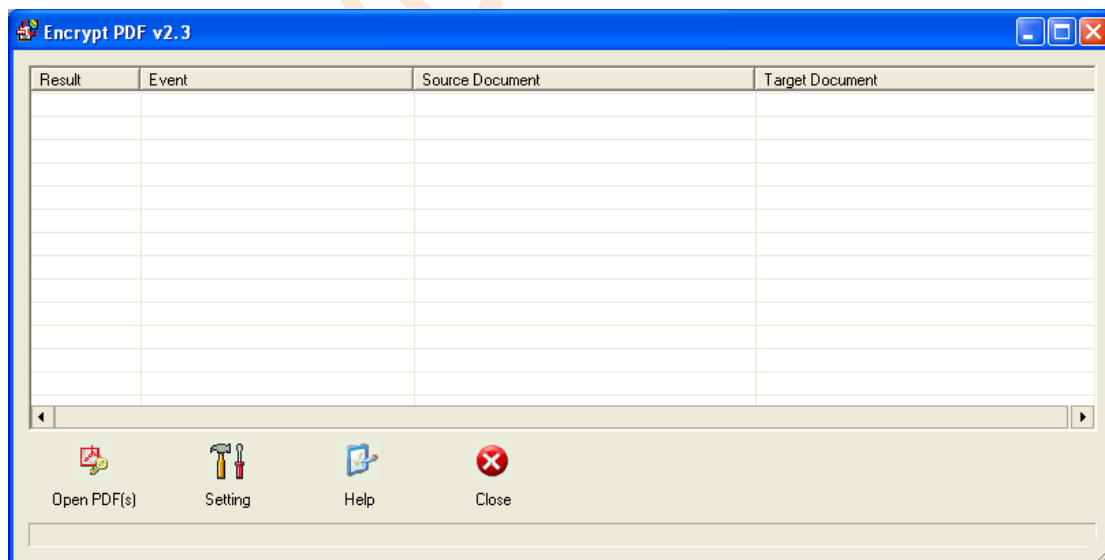

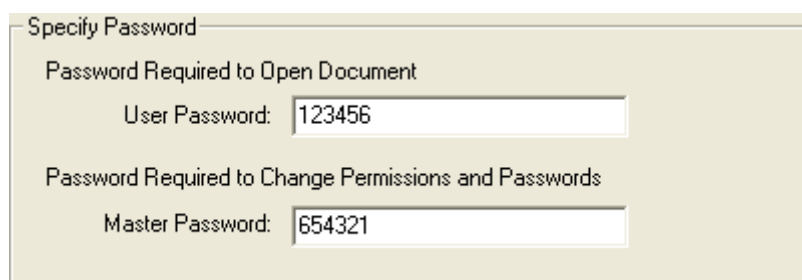

Fig1. GUI interface of VeryDOC Encrypt PDF

Set PDF encryption and other properties

Firstly, click **Setting** on GUI interface so that **Encrypt PDF Options** panel pops out:

- To set PDF open/user password, please input user password in edit-box **User Password**
- To set PDF master/owner password, please type master password in edit-box **Master Password**
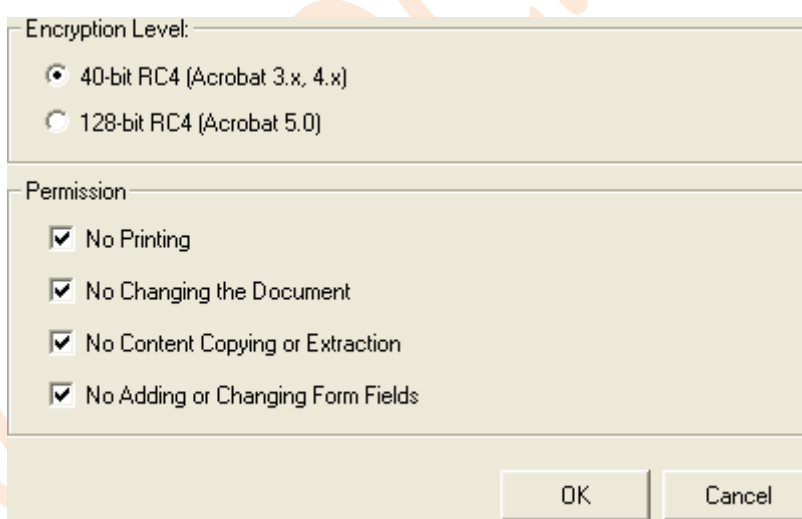

Fig2. Set PDF user password and master password

- To select proper encryption level, please click one of radios **40-bit RC4(Acrobat 2.x,4.x)** and **128-bit RC4(Acrobat 5.0)**
- To set permission/restrictions based on owner/master password, please select proper edit-boxes **No Printing**/**No Changing the Document**/**No Content Copying or Extraction**/**No Adding or Changing Form Field**

Fig3. Select encryption level and restrictions

To make setting effective later and close this pop panel, click **OK** in the end; to reset PDF encryption, click **Cancel** to repeat as mentioned above.

Input and export PDF files

- To input source PDF files, it is easy for you to add them with one of ways: click **Open PDF(s)** on GUI interface > select PDF files in pop dialog box > click **Open**, or just drag and drop PDF files into processing form directly, finally, added PDF files can be
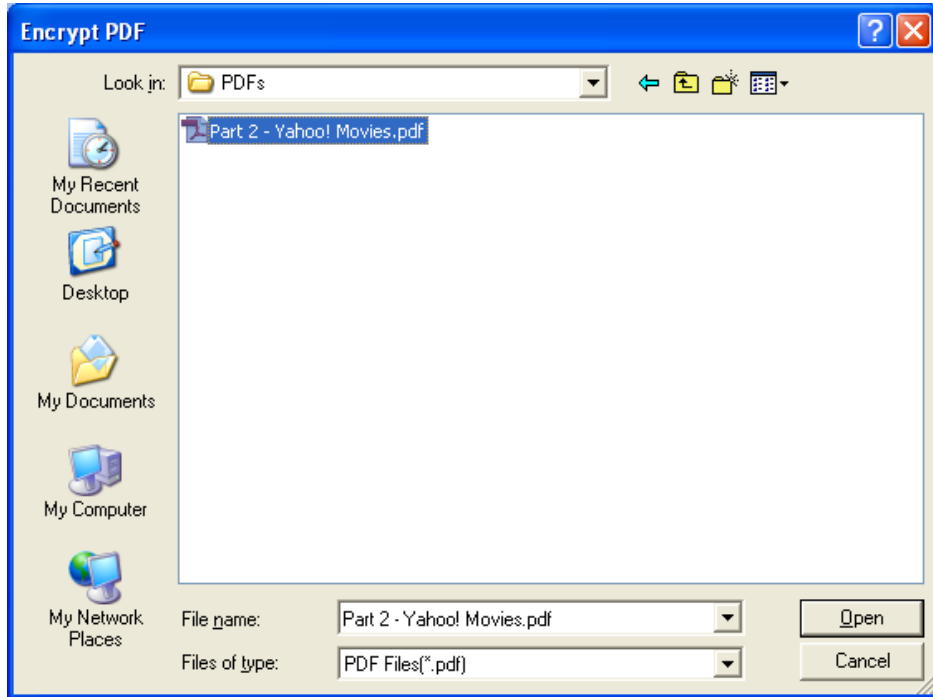

displayed as directories in processing form

Fig4. Add PDF files for PDF encryption

- After adding PDF files for encryption, another dialog box pops out, then, select destination folder there for saving encrypted PDF file later > click **Save/Ok**, then, in processing form, appeared hint indicates successful encryption
